## Synopsis of Fisheries, Ships and Boats

---

### *N.—FISHERIES*

The following Table gives such particulars as are recorded in the Census Sheets of past years. It will be noticed that in the early years the Tonnage of Vessels employed in the Fisheries was quite as large as that of the present day, though the number of the vessels was much smaller. That is explained by the fact that the sailing vessels used in the Seal Fishery were included in the returns, and, being large ships, brought up the tonnage :

\*These figures give the number of Nets and Seines, while the figures for 1911 and 1921 give the number of Nets and Lines.

The use of traps has followed the decrease in number of nets and seines, but the continued increase of fishing rooms in actual use shows that there is no falling off in the prosecution of this industry. The total value of fish products for the year 1910, as shown by the Census Sheets, was \$9,196,138, as against \$11,740,525 in 1920. The following Table makes comparison with respect to the catch of Salmon, Herring, Lobsters, etc.

*O.—SHIPS AND BOATS*

Owing to absence of detail, the figures respecting Sailing Vessels in the following Table, for the years 1857, 1869, and 1874, must be taken to represent all vessels of whatever tonnage. There is no record of foreign-going ships, but it is not supposed that such are included in the figures given. Being a maritime people, with the riches of the seal and cod fisheries at our door, the returns of Ships and Boats will always be important—the increase or decrease in the figures indicating the fluctuations in the prosecution of the fisheries caused by short catches or unremunerative markets.
